

June 23, 2006

Crawford Architects is pleased to announce that it has been retained by Vulcan, Inc and the NFL Seattle Seahawks to provide full architectural services for their new team practice facility and headquarters on beautiful Lake Washington in Renton, Washington.

The new 200,000 square foot complex, nearly five times bigger than the Seahawks' existing home and the second largest in the NFL, will be home for players, football operations, and Seahawks' administration. The facility will include access for fans to attend training camp for up to 3,000 spectators a day.

Also planned are one indoor and four outdoor practice fields, 50,000 square feet of training facility space, 15,000 square feet of player meeting space, and 48,000 square feet of administrative office space.

Crawford Architects recently joined the Seahawks in an extensive tour of other recently completed NFL training facilities. According to Tom Proebstle, Design Director for Crawford Architects, "These facilities are being used as recruiting tools for players, coaches and staff. It is no longer good enough to just use your stadium as the primary recruiting tool. Owners are looking to their practice facilities to help in creating a quality of life for the team that is representative of the core values of the franchise."

Ground breaking is in October 2006 with an expected completion in the summer of 2008.
