ALOHA FROM HAWAII: It's a tough gig, but someone has to do it. We're just getting started on a project in Honolulu – the renovation and expansion of Aloha Stadium, the largest stadium in the State of Hawaii. The multi-year, multi-phase project is focusing on deferred maintenance and future improvements to this famous stadium - home of the University of Hawaii Warriors football, the Aloha Bowl and 30 years of Pro Bowls. We're working with our friends at the appropriately named firm, Architects Hawaii Limited.

LOOKING FOR A SIGN?: It should be a little easier to find us these days- just look for the sign. Our friends at [A. Zahner Company](#) manufactured and installed our new corner signage. The aluminum, galvanized steel and acrylic icon is lit from within by LED fixtures which can be programmed to change color. Our etched "C" logo is a shining beacon that'll guide you to our offices... or at least around the corner to Grinders.

ZAHNER EXPANDS: Speaking of Zahner, we are designing the expansion of their Production Facility in Kansas City. It is being designed with Zahner's patented ZEPP (Zahner Engineered Proprietary Panel) System which allows for a free-form building exterior skin. The expansion provides additional factory floor and showcases their metal-working capabilities. We've been able to do some fun, creative work with the Zahner folks over the years, and we're honored to design their new facility. Check out Zahner's work on their website.

NEWEST RECRUITS: We have three new faces at the Crawford office: Katie McCurry, Sarah Tankard, and Rebecca Morello. A few things to note about each: Katie, our Marketing Coordinator and graduate of the University of Kansas, enjoys the local music scene and as far as we can tell her hobbies are working late and meeting deadlines. Sarah, also a University of Kansas grad, has joined our team as Administrative Assistant. An avid runner, she is always in a good mood; especially when the Jayhawks win. Rebecca, Graduate Architect, joins us fresh from receiving degrees from the University of Michigan in Industrial Engineering and Architecture. Her love of travel has not only taken her to four continents but also down the map to Kansas City. With a large bib, BBQ rib and a cold Boulevard, we say welcome!

NEW DIGS FOR THE JACKRABBITS: South Dakota State University, home of the mighty Jackrabbits, has commissioned us to prepare a feasibility study for a new football stadium and to propose updates to their master plan for athletic facilities on campus. South Dakota State has recently completed their transition to Division I and are evaluating commensurate improvements to their athletic facilities. We are cheering on the Jackrabbits and Lady Jacks!

CRAWFORD IN REAL-TIME: Have you ever heard a Crawford tweet? Click [here](#) to see what goes on at Crawford and better yet, the twitterverse. #architectsarecool

NEW SCHOOL OF OSTEOPATHIC MEDICINE FOR MSSU: Crawford has teamed up with Oz Architecture out of Denver, Colorado to design the new School of Osteopathic Medicine for Missouri Southern State University. The building which will be featured prominently at the new "front door" to the University is a collaboration between the Kansas City University of Medicine and Biosciences and MSSU. Design is underway and working with Oz has been a great success.

IT'S OPEN! NEW HOME FOR FIGHTING IRISH BASKETBALL: Since breaking ground back in September of 2008, the students, faculty and alumni at the University of Notre Dame have been anticipating the re-opening of the Joyce Center, including the new Purcell Pavilion. The Joyce Center has been renovated, including reseating the arena, new concessions, and several upgrades to the concourse. The Purcell Pavilion is a new addition which houses the new two-story entry, concessions, team store and club area.
